

Postdoc Position in Embryonic Stem Cell Biology

INSTITUTE OF HUMAN GENETICS, Montpellier, France

A three years postdoc position is immediately available at the Institute of Human Genetics of Montpellier, to study the molecular grounds of genomic instability of mouse embryonic stem cells. The candidate will benefit from an exceptional scientific environment and state-of-the-art core facilities provided by the Institute of Human Genetics. The candidate will use cellular and molecular biology techniques to study novel molecular pathways regulating genome stability in mouse embryonic stem cells. Highly motivated candidates with a Ph.D., or equivalent, a strong background in molecular and cellular biology, and a significant experience in stem cell research are encouraged to apply. Gross salary is between 2 875.90€ and 4 122.59€ depending on experience. Montpellier is an international and scientifically dynamic city located in the south of France very well connected to Paris and other European cities.

Applications must state the name of at least two referees and can be sent by email (domenico.maiorano@igh.cnrs.fr) or by regular mail to Domenico MAIORANO, Institute of Human Genetics. 141, rue de la Cardonille. 34396 Montpellier Cedex 5. France.
